Attendance System

- Manual attendance
 - Automatic alerts on absence
 - Integration with facial recognition (optional)
 - Per-class & per-day records
-

Alert System (WhatsApp)

- Automated alerts:
 - Absence
 - Result published
 - Manual alerts:
 - Entire school
 - Selected classes
 - Selected students (cross-class)
 - Custom message editor
-

Excel Import / Export

- Download template
 - Upload Excel
 - Strict column name matching
 - Ignore extra columns
 - Auto-create student records
-

Fee Management

- Class-wise student view
 - Monthly fee
 - Pending / partial / paid status
 - Inventory charges added to monthly bill
 - Full breakdown per student
-

Accounting Dashboard

- Filters:
 - Not paid
 - Partially paid
 - Fully paid
 - Default hides fully paid
 - Graphs & visuals (useful only)
-

Payment Modes System

- Cash
 - JazzCash
 - EasyPaisa
 - Bank transfers
 - Custom modes (admin add)
 - Stored lowercase (no duplicates)
-

Daily Cash Reconciliation

- Opening balance
 - Closing balance
 - Expected vs actual per payment mode
 - Mandatory comment on shortage
 - Red / green indicators
 - Forced reconciliation before logout
 - Popup on next login if skipped
-

Inventory & Sales

- Predefined inventory items
- Unique item names (case-insensitive)
- Variable prices allowed
- Sales added to student account
- Timestamped entries
- Included in monthly fees

Invoices & Printing

- Landscape PDF invoices
 - Download PDF
 - Direct print option
 - Print:
 - Entire school
 - Selected classes
 - Selected students
 - Search by:
 - Name
 - Roll number
 - Class
-

Reports (Admin & Accountant)

- Fee collection graphs
 - Payment mode distribution
 - Daily / monthly summaries
 - Clean visuals only (no clutter)
-

FACIAL RECOGNITION ATTENDANCE (PLUGIN)

Technologies (Tech Stack)

Frontend

- React (**web-first**) – runs standalone or inside CMS ✓
- PWA – works on desktop & mobile ✓
- MediaPipe Face Detection – client-side stabilization
- HTML5 Video + Canvas

- Tailwind CSS & Framer Motion

Backend

- **Python (FastAPI, standalone service)** – handles only face recognition ✓
- FaceNet – embedding generation
- Cosine distance – identity matching
- NumPy & OpenCV

Storage

- **File-based: JSON + NumPy files** – self-contained, plug-in/out friendly ✓
 - Attendance stored in CMS, not in FR module ✓
-

Plug-and-play highlights ✓:

1. Web-first PWA frontend → works standalone or integrated
2. Backend is standalone → only provides identity API
3. File-based storage → independent & easy to backup/restore
4. Attendance managed by CMS → module can be enabled/disabled easily
